

A unique method for restoration of steel and concrete tubular piling is now available. The method developed by SUAB fulfills the following criteria's:

- Permanent repair
- Original strength restored
- Gives corrosion protection
- Gives mechanical protection towards ice, erosion etc.
- Even a high quality due to secure method of installation

The method has been used in a great number of harbors and proven to be outstanding compared to conventional repair methods.

*Example of a cracked concrete pile in the oilharbour at Södertälje.*
